

WHAT IS CLAIMED IS:

1. A disc changer comprising:

a magazine for storing a plurality of arranged discs;

5 a disc carrier for carrying a selected disc from the magazine to a reproducing position;

a transporter for transporting the disc carrier in the disc arranging direction;

10 a disc playing section for playing the selected disc carried from the magazine;

a moving section which moves when the magazine is inserted into the disc changer;

an urging member for urging the moving section; and

15 a lock detector operable by the movement of the moving section,

wherein when the magazine is inserted into the disc changer the moving section engages into an insertion groove provided on the magazine to lock the magazine on the disc changer, and actuates the lock detector.

20

2. A disc changer according to claim 1,

wherein the moving section includes a lock arm for engaging into the insertion groove and a detection arm for actuating the lock detector,

25

wherein the movement of the lock arm and the movement of the detection arm are in synchronism with each other.
